

After watching the *EnviroClip: What is Climate Change?* discuss the following questions in small groups and/or as a whole class.

1. What are **greenhouse gases** and how do they impact people and other living things?
2. Scientists agree that burning fossil fuels is the main factor contributing to global warming. What are **fossil fuels** and why do people burn them?
3. How are we impacted by climate change in Tacoma? How might climate impacts differ if we lived in another climate, like the desert climate of Arizona?
4. What is the **Tacoma Climate Action Plan**? How does this plan help our community address climate change?
5. What can *students* do to reduce the impacts of climate change?

What questions do YOU have about climate change? Write down your questions so you can ask an EnviroChallenger.
